

THE START-UP EXPANDS ITS RESTAURANT OFFER

UEAT SERVICES NOW AVAILABLE ON PERSONALIZED MOBILE APPLICATIONS

Quebec, Wednesday March 27, 2019 - After implementing both its self-ordering kiosk and its ordering solution in restaurants, **UEAT** has recently started to offer ordering options using mobile apps. Restaurant owners who want to update their online order by creating a custom application can now do so with **UEAT** technology.

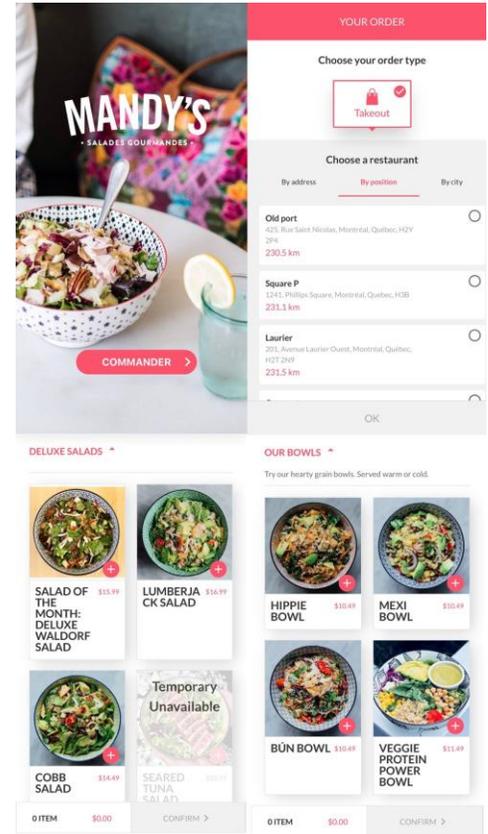

To try out this new feature, you can download the Mandy's application, UEAT's first release, on your smartphone or tablet. This allows you to easily navigate through the menu, select or customize your meal and then schedule your order pick-up at the different restaurant locations, all this in just a few steps.

Simple and inexpensive, the applications are entirely modeled on the online ordering solution already created and integrated by **UEAT** on the restaurant website. "It's the same interface and the same design, except it comes as an app that can be downloaded in seconds on a smartphone or tablet. It's a big deal for our clients because the application does not involve additional integration. It is the same online ordering platform currently available on their website", points out Martin Lafrance, co-founder of **UEAT**.

Unlike popular platforms that allow online orders from various restaurants and delivery by a third party, the application created by **UEAT** avoids such competitive proximity. In addition to making life easier for restaurant owners, it promotes customer loyalty and creates the habit of visiting the restaurant app when hunger calls!

ABOUT UEAT

UEAT was created less than two years ago by five young entrepreneurs, Martin Lafrance, Alexander Martin, Bernard Imbert, Matthew Perron and Sébastien Huot, who wanted to offer restaurateurs the technological power of the biggest players in the industry. Combining optimal user experience, ease of use, performance and artificial intelligence, UEAT offers the online order directly on the restaurants' website, on interactive self-ordering kiosks at the location, or, more recently, through an application. Motivated by the desire to address various issues, including labor shortage and the technology accessibility for restaurant owners, in addition to wanting to provide the best user experience for the restaurant's customers, UEAT aspires to revolutionize the way consumers order their meal. Let us also mention that UEAT contributes to creating employment in the region and the province with currently thirty employees based in Quebec City.
